### 1 Development of SNMP-XML translator and gateway for XML-based integrated network management

Jeong-Hyuk Yoon, Hong-Taek Ju, James W. Hong

 July 2003 **International Journal of Network Management**, Volume 13 Issue 4

Publisher: John Wiley &amp; Sons, Inc.

 Full text available: [pdf\(251.82 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The research objective of our work is to develop a SNMP MIB to XML translation algorithm and to implement an SNMP-XML gateway using this algorithm. The gateway is used to transfer management information between an XML-based manager and SNMP-based agents. SNMP is widely used for Internet management, but SNMP is insufficient to manage continuously expanding networks because of constraints in scalability and efficiency. XML based network management architectures are newly proposed as alternatives t ...

### 2 Automating database construction

Israel Spiegler

 April 1983 **ACM SIGMIS Database**, Volume 14 Issue 3

Publisher: ACM Press

 Full text available: [pdf\(750.04 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#)

This paper introduces a methodology for automating database construction in which Problem Statement Language (PSL) statements are translated into Data Definition Language (DDL) statements of a Data Base Management System (DBMS). These two commercially available software tools, when linked together, encompass the database construction life cycle from requirement specification to implementation of a target database system via the DBMS software.

**Keywords:** DBMS, database, information system life cycle, problem statement language, requirement specification, software development

### 3 KM-4 (knowledge management): distributed knowledge management: On structuring formal, semi-formal and informal data to support traceability in systems engineering environments

Paul Mason, Ken Cosh, Pulyamon Vihakapirom

 November 2004 **Proceedings of the thirteenth ACM international conference on**

### 1 [A database management facility for automatic generation of database managers](#)

David W. Stemple

 March 1976 **ACM Transactions on Database Systems (TODS)**, Volume 1 Issue 1

Publisher: ACM Press

Full text available: pdf(1.13 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A facility is described for the implementation of database management systems having high degrees of horizontal data independence, i.e. independence from chosen logical properties of a database as opposed to vertical independence from storage structures. The facility consists of a high-level language for the specification of virtual database managers, a compiler from this language to a pseudomachine language, and an interpreter for the pseudomachine language ...

**Keywords:** data independence, database management systems

### 2 [A Database Management System for the Federal Courts](#)

Jack R. Buchanan, Richard D. Fennell

 March 1984 **ACM Transactions on Database Systems (TODS)**, Volume 9 Issue 1

Publisher: ACM Press

Full text available: pdf(1.35 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

A judicial systems laboratory has been established and several large-scale information management systems projects have been undertaken within the Federal Judicial Center in Washington, D.C. The newness of the court application area, together with the experimental nature of the initial prototypes, required that the system building tools be as flexible and efficient as possible for effective software design and development. The size of the databases, the expected transaction volumes, and the ...

### 3 [Draft report on requirements for a common prototyping system](#)

R. P. Gabriel

 March 1989 **ACM SIGPLAN Notices**, Volume 24 Issue 3

Publisher: ACM Press

Full text available: pdf(4.76 MB)

 Additional Information: [full citation](#), [citations](#), [index terms](#)
